- Status:
  - Published 7 articles!!!
  - 1 almost finished + 1 held back
  - 1 english to be reviewed
  - Docu/Website
- Open Issues:
  - Publish almost finished article
  - Update documentation
  - English?
  - Data / Stats
  - Update your timetracking
  - Don't let one person have significantly more time spent than others. Let the others catch up and relax.
  - Presentation
    - Put your lessons learned in the presentation
    - Give an overview to the entire project
    - Explain how you organized yourself and your reviewing process in your presentation as the professors very much liked how open and accessible and organized our data (website) was. The professors want us to show "how it's done, as other can learn a lot from us".
    - Structure the presentation the way you like.
    - Show some articles and a few details, edit history maybe, comments by editors maybe, etc., just give a glimpse of an idea into the process of how articles evolve and what interactions happen.
- Presentation:
  - Lessons learnt:
    - People (Editors / Scientists)
    - Wikipedia community (Editors and Rules, etc.): Highlight the structure of Wikipedia a little: how did you contact editors, how are their rules, how did they treat you, what did they allow / deny if anything got denied?
    - We should formulate critique and possibilities for improvement where we see it necessary.
      - How do we think are the rules accessible? Were they communicated clearly? Are these rules easily accessible? Do the different editors have the same standards?
- Goal:
  - Status
  - Timeline
  - Presentation
